

# INTRODUCING OPTCONNECT MYLO

Tenacious Connectivity, Magnetic Personality

## Built for IoT and M2M Communication

OptConnect mylo is specifically designed for ATM, POS, and sensor applications using the latest **4G LTE Category M1** cellular technology that offers benefits not seen before.

## SUPERIOR CONNECTIVITY

OptConnect mylo penetrates buildings and basements better than any other cellular technology. It even works when it's farther away from cell towers than other products. While older technologies might be close enough to work with only one cell tower, mylo can see and communicate with several more distant towers making your business less affected by issues at a single tower.

## BEST CONGESTION PERFORMANCE

During peak usage periods at concerts and sporting events, mylo keeps working when phones, tablets, and other products lose their connection. The cellular carriers give mylo priority over other technologies. So, when everyone is sharing video of the big game and other machines are faltering, mylo keeps your equipment going strong.

## MULTI-CARRIER REDUNDANCY

Not satisfied with superior connections on only one carrier, mylo works with both Verizon and AT&T networks. That means that if one network goes down, mylo automatically switches to the other network in just a few seconds so your business is barely affected when one carrier has a hiccup.

## CASE INSTALLS ITSELF

OptConnect mylo attaches itself to virtually any metal surface thanks to the magnets hidden in its base. It's the first cellular product that literally installs itself. No brackets. No tape. Almost magic.

## FULLY MANAGED SOLUTION

Best of all, all of these cutting-edge features – superior connectivity, the best congestion performance, multi-carrier redundancy, and a case that installs itself – come in addition to our already robust suite of fully managed services.
