

MG90 5G for Law Enforcement— Gaining Real-Time Situational Awareness

Meet Captain Harris

Captain Harris is responsible for the operations of a mid-sized police department. She is looking to leverage new technologies to better equip her field officers.

THE CHALLENGE

ENSURE OFFICER AND CITIZEN SAFETY WHILE INCREASING ACCOUNTABILITY

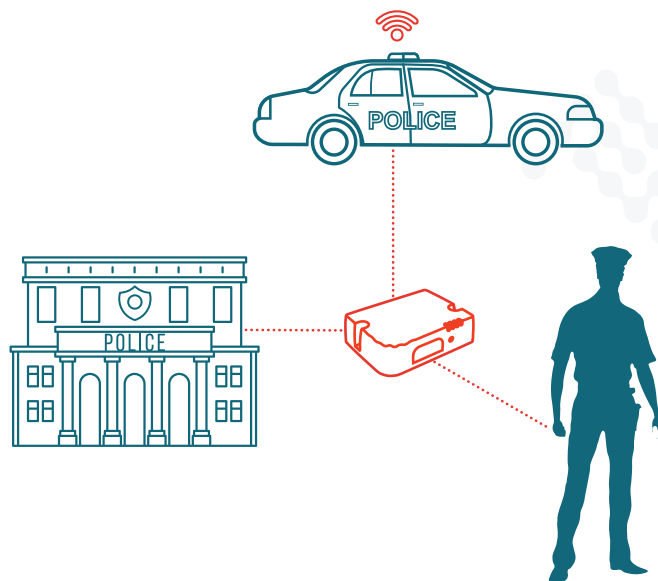

Captain Harris needs to gain real-time situational awareness of events in the field and communicate updates to her officers in real time. She also needs to ensure that video and data is properly handled and stored to maintain proper chain of custody.

THE SOLUTION

THE AIRLINK MG90 5G ENABLES LIVE VIDEO FEEDS FROM OFFICERS, DRONES AND SECURITY CAMERAS

The AirLink MG90 5G is a ruggedized, dual-radio wireless router purpose built for First Responder vehicle area networks (VANs) delivering live video capabilities in the field. The MG90 5G gives officers access to high-resolution, secure live video feeds from security cameras, drones and other officer cameras, and allows officers to send live dash camera and body camera videos directly to the station.

THE RESULTS

AIRLINK MG90 5G WILL HELP POLICE DEPARTMENTS BE BETTER INFORMED, EQUIPPED AND PREPARED

AirLink MG90 5G vehicle area networks (VANs) will help offices better respond to emergency situations by delivering and receiving real time video and data feeds. Real time video feeds also eliminates the need for officers to download videos at the end of their shift, increasing efficiency and helping to ensure the evidence chain of command. The AirLink MG90 5G will help Captain Harris leverage new technologies as they become available future-proofing her investment.
