

Reliable Cellular Connectivity for Safer & More Connected Learning Environments

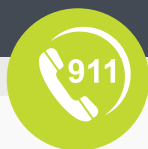

The Opportunity

Schools, colleges, and universities rely on dependable cellular connectivity to support campus safety, staff communications, student engagement, and daily operations. However, classrooms, administrative buildings, libraries, athletic facilities, and residence halls often experience poor cellular coverage, creating dead zones that impact communication and the overall campus experience.

The Solution

Nextivity helps educational institutions eliminate cellular dead zones across campus with CEL-FI solutions that deliver reliable voice, text, and data connectivity. The result is stronger communications, improved campus safety, and a better experience for students, staff, and visitors.

Improve Safety

Reliable emergency communications

Support Learning

Connected students and staff

Enhance Operations

Reliable campus communications

Reduce Costs

Simpler than traditional DAS

Why it Matters

Nextivity helps educational facilities strengthen campus-wide cellular coverage, improving safety, supporting reliable communication, and enhancing the experience for students, faculty, staff, and visitors. With a cost-effective alternative to traditional DAS, campuses can also prepare for growing connectivity demands.
